

YULIA OBSHANSKY

Toronto, Ontario | P: +1 647-675-2842 | yuliaobs@gmail.com | linkedin.com/in/yulia-obshansky

EDUCATION

YORK UNIVERSITY

Bachelor of Science (Honours), Computer Science

Toronto, ON

Expected May 2027

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Advanced Object-Oriented Programming, Databases, Computer Organization, User Interfaces

Awards: York University Entrance Scholarship (90-94%); Lassonde Entrance Scholarship (90%+)

WORK EXPERIENCE

HYDRO ONE

Markham, ON

Technical Business Analyst Co-op

May 2025 - Present

- Designed and implemented Python-based automation tools that improved internal developer and analyst workflows, reducing manual processes by 40% while emphasizing reliability, validation, and secure data handling.
- Worked with large-scale SQL datasets to validate data quality, investigate anomalies, and ensure accuracy
- Collaborated with engineers using Git-based workflows, participating in code reviews and cross-functional problem-solving to improve system stability, performance, and maintainability.

PROJECTS

LEAF DRIFT - 3D GAME ENGINEERING PROJECT

Jul 2025

- Engineered 10+ modular gameplay and systems-level components in Unity using C#, following production-style, scalable architecture similar to live development environments.
- Applied OO design principles to improve code reuse, maintainability, and rapid iteration across systems.
- Built event-driven systems supporting real-time interactions at 60+ FPS, emphasizing performance and reliability

YARNTRACK - MOBILE APPLICATION

Dec 2024

- Developed a data-driven mobile application using JavaScript and React Native, focusing on maintainable architecture
- Implemented API-driven workflows integrating frontend components with backend services and persistent storage, supporting 100+ records and iterative feature development.
- Designed performance-conscious UI components balancing responsiveness, usability, and maintainability.

GRAPH-BASED RELATIONSHIP MAPPING API

Aug 2024

- Built a production-style RESTful API managing 1,000+ entities, enabling efficient data access
- Improved API performance by 25% through query tuning & iterative testing, reinforcing performance-aware system design.
- Implemented and tested algorithmic traversal logic, reinforcing data structures and performance-aware system design.

COMPETITIONS

PANPAL BOT - Software Engineering Hackathon Project

Toronto, ON

Team Member at Ellehacks

Feb 2023

- Collaborated in an Agile, time-constrained team to deliver a functional prototype.
- Developed Python services integrating external APIs with testing and structured error handling.

SAFER U APP DESIGN - UX-Driven Mobile App Design (Award Winner)

Toronto, ON

Team Member at CS Hub Local Hack Day Hackathon

Jan 2023

- Awarded Best UI/UX for user-centric design and usability.
- Contributed to design and implementation of intuitive mobile application workflows.

ADDITIONAL

Languages: Python, C#, Java, JavaScript, TypeScript, SQL

Developer Tools: Git/GitHub, REST APIs, CI-friendly workflows, Node.js

Concepts: Developer Tooling, SDLC, Object-Oriented Design, Event-Driven Systems, Performance Optimization, Workflow Automation
